

EXPERIENCE

Data Labeling Analyst III

Jan 2026 - Present

Meta | On contract with Tundra Technical Solutions | Remote

- Write, diagnose, evaluate, and grade quality annotations produced for SFT (Supervised Fine Tuning) and RLHF (Reinforcement Learning from Human Feedback) annotations for internal company tools.
- Maintain project and annotation guideline documentation with a focus on precise, but accessible language to provide clear, concise, and understandable material.
- Created annotation-creation training material resulting in a 59% increase in annotation creation and 35% increase in high quality annotation creation by simplifying complex and jargon-intensive documentation.
- Create QA tooling and test scripts using Python, Javascript, and Claude Code to increase efficiency while maintaining data quality.

Lead Programmer

Mar 2025 - Present

Wholesome Games LLC | Remote

- Lead a small team of programmers to create an incremental web-game using Next.js and PostgreSQL.
- Utilize Open Project for architectural planning, game design documentation, meeting logistics, and game asset management.
- Create a game-view editor using Figma API to avoid spending thousands on proprietary software.
- Manage and troubleshoot server related issues using Railway and Sentry.

Frontend Developer & Research Assistant

May 2024 - October 2024

DeFake Project | Rochester, NY

- Rebuilt and iterated on deepfake detection app using React with Next.js, Tailwind, Wordpress CMS.
- Conducted research and presented academic poster on data visualization and UI/UX practices for deepfake detection software for RIT's Undergraduate Research Symposium.

Frontend Team Lead

January 2023 - August 2023

RIT ESL Global Cybersecurity Institute | Rochester, NY

- Built software and created data visualizations for government contracts sponsored by the Cybersecurity and Infrastructure Security Agency (CISA) and the Department of Homeland Security (DHS).
- Lead team of 3 developers to create SBOM analysis tools in using Github Projects and agile methodology.
- Overhauled preliminary HTML prototype to full-stack application with D3.js, Docker, Spring, and Angular.

Full Stack Software Developer

January 2022 - August 2022

Poseidon Systems | Victor, NY

- Maintained live cloud-based condition monitoring system for asset and equipment health with a small team.
- Designed various feature pages and real-time graphs using Figma and implemented designs using Angular with RxJS, React, Highcharts, and Cypress.
- Developed data-analytic tools utilizing Highcharts, MongoDB with GraphQL, and InfluxDB.
- Created a website-status monitoring hub from scratch using Google Cloud API, Express.js, and Angular.

Software Developer

August 2021 - December 2021

Fujifilm | Rochester, NY

- Collaborated with an agile team to update and maintain Fujifilm Kiosk printing services.
- Programmed kiosk services and UI using Vue.js, .NET Framework, and MongoDB.
